Maine Firm Launches Compliance Software

Westbrook, Maine (November 2, 2015) – St.Germain Collins, a local environmental, compliance and engineering firm, is pleased to announce the launch of *Sentry EHS* Version 2.0 – a cloud-based environmental, health and safety (EHS) solution.

Sentry EHS is instrumental in keeping companies in Maine (and in more than 2,500 locations across the US) in compliance with complex and ever-changing rules from EPA, OSHA and other regulatory agencies. *Sentry EHS* captures the extensive knowledge of St.Germain Collins' senior regulatory specialists who customize the database – with specific tasks that apply (state and federal environmental, worker safety, etc.) and when they are due – into an easy to navigate and understand database. Clients can then log in on a daily basis and see what they have to do, and managers can check to make sure their EHS program is effective.

“There are literally thousands of EHS regulations to keep track of, and St.Germain Collins is excited to offer this improved online compliance tool to make it easier for businesses to complete the right tasks at the right times, safeguarding workers and protecting the environment,” said Patrick Coughlin, Principal of St.Germain Collins. “Companies using Sentry EHS are also able to save money by lowering their overhead costs and reducing the possibility of regulatory fines.”

Sentry EHS was initially created using readily available tools to get it online quickly. Due to the growing client base and their specific needs, St.Germain Collins redeveloped *Sentry EHS* into a much more powerful application that runs on the increasing number of electronic devices in the workplace.

ABOUT ST.GERMAIN COLLINS: St.Germain Collins offers a full range of environmental, engineering and regulatory compliance services. From our office on Main Street in Westbrook, Maine our senior scientists, engineers and regulatory specialists assist clients throughout New England and the United States. These clients include manufacturers, lending institutions, solid waste recycling and disposal firms, telecommunications companies, energy providers, and higher education clients.
